

# DECK NEO

The Deck Neo is a thin client, a small and affordable computer that connects to powerful on-premise or cloud servers instead of needing its own processing power. This lets you access demanding programs and data storage without the cost of a full computer on every desk.

## FEATURE SET

### Cost-Effective

The lower upfront cost of thin clients combined with reduced maintenance and energy costs translates to significant savings over time for businesses deploying Deck Neo across their organization.

### Performance Powerhouse

Deck Neo, relying on a robust server, excels in delivering a seamless and responsive user experience, effortlessly handling all basic office tasks and seamlessly managing even the most complex and demanding loads.

### Scalability Made Easy

As your business grows, adding more Deck Neo devices is a simple process. Their minimal hardware footprint and reliance on server resources makes them easy to integrate into your existing infrastructure, allowing you to scale your deployment to meet your evolving needs.

### Security-Centric

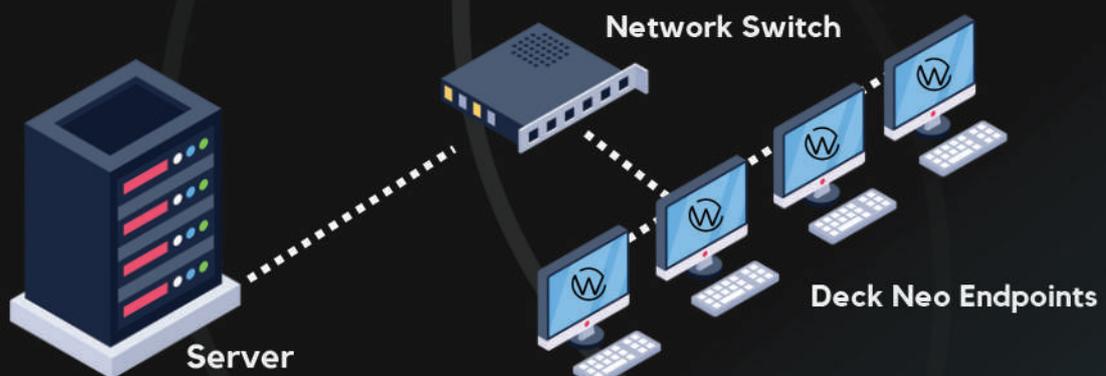

Deck Neo is designed with security in mind. Data processing and storage happen on a central server, minimizing the risk of data breaches or loss if the thin client device itself is stolen or compromised.

# INDUSTRY LEADING

TRUSTED BY MARKET LEADERS

## KEY FEATURES

- More than **50% reduction** in cost of ownership
- Over **80% savings** in network management/maintenance/upgrade/energy costs annually
- Better management practices and increased productivity/efficiency of IT administrators
- Separation of critical company data and physical infrastructure of client devices, ensuring highest security for the company's critical data and other resources
- Remote work capabilities with minimal latency or slow load time
- Access to latest features and security patches through software updates.
- Vapor Manager, an integrated feature included with the Deck, provides streamlined user management, real-time monitoring, and usage insights for enhanced operational efficiency
